USCG Cape Sarichef LORAN and Light	Open	Dump / Landfill	28	Cape Sarichef, NW end of, Unimak Island	Akutan	AK	99553	USA	54.598333	-164.925933	World Geodetic System of 1984	No	No	No		USCG Cape Sarichef LORAN and Light http://dec.alaska.gov/Applications/SPAR-Public/MV/CSP/SiteReport28
USCG Scotch Cap Facility	Open	Dump / Landfill	29	SW End of Unimak Island	Akutan	AK	99553	USA	54.395	-164.744722	World Geodetic System of 1984	No	No	No		USCG Scotch Cap Facility http://dec.alaska.gov/Applications/SPAR-Public/MV/CSP/SiteReport29 The site was used to operate a lighthouse and associated navigational aids support between 1933 and the 1970s. The original Scotch Cap light station was destroyed by a Tornado surge in 1946 and rebuilt in 1950. The facilities include a radio tower, lighthouse, light house, three two-story dwellings, a boathouse, barracks and a shed. Six ASTs (one 1,000-gallon, one 3,000-gallon, and two 10,000-gallon), and two uncrewed and four ASTs (two 3,000-gallon and two 10,000-gallon) remain; petroleum contaminated soil. Landfill (architectural plans and drawings suggest that a landfill was maintained for the disposal of solid waste while the facility was operational); building debris. The U.S. Coast Guard and the Corps of Engineers have investigated the site in the past. Corps determined no further action is needed under the FUDS Program. USCG removed some batteries, transformers, drums of used oil, paints, ect. in 1997. The Corps of Engineers conducted a preliminary assessment in 1989. It documented two surges on the east side of the old barracks which contained petroleum products and emitted strong odors; a landfill a ravine north of the lighthouse which contained drums, debris, and an oily sheen on the creek.

The UST was found to be partially open and submerged with water. In 2010 the UST was purged of water and removed from the site. Three soil samples collected 6 inches below the former UST, at 3.75 ft. deep, contained benzene up to 0.387 mg/kg. The excavation was then backfilled with stockpiled soil and clean fill to bring to grade.

Hazardous materials/wastes known to exist: diesel fuel, lead acid and nickel-cadmium batteries, asbestos, and electrical equipment contained polychlorinated biphenyls (PCBs). Antennae 2 and 4 are located north of the Equipment and Power Building at Upper Camp. The 500-gallon AST and 1,000-gallon AST used to heat the two antennae have been removed. No soil sample results were above the site soil cleanup level for ingestion/inhalation. The final Record of Decision (dated December 2003) is for site closure. RCRA EPA ID#AKA237009108. Hazardous waste activity generator 1. CERCLA AK0570028623 Site encompasses 451 acres in size. In 1985, 1 year after the "AK Communications Disposal Act," the site along with other WACS was taken over by RCA Alaska Communications (now ALASCOM), part of contract Mike Rhoads, Project Manager, 611th CES/CSF 150471 25th Street, Steadward AFB, AK 99506-2270, Telephone (907) 552-4820. Last staff assigned were Erickson, Robert, Howard, Vickaryous, and Halverson. Former file number CS77.08-1 consolidated with 2518.38.001.

A 2005 USGS investigation found elevated metals in marine sediment and biota. The former mine site has been subdivided and sold for residential/recreational housing. This site was investigated as part of an area-wide abandoned mine inventory effort. The former mine shaft is located in the intertidal area. The mill, ore bins, and dock were located nearby. Elevated concentrations of arsenic, cadmium, copper, lead, mercury, selenium, and co-mingled petroleum were found in the marine sediments.

The Japanese bombed Dutch Harbor and Fort Mears in 1941. Following the bombing the military dispersed its troops moving back up into Unalaska Valley and Pyramid Valley to minimize the potential for damage if future air raids occurred. The Corps of Engineers had a contractor tear down the abandoned buildings and debris and dispose of them in various landfills during the mid-1980s. Underground fuel tanks were abandoned in place. In the mid-1990s the Corps started working on the sites again under the Formerly Used Defense Sites (FUDS) program. Site inspections were done around the former buildings to look for remaining underground fuel tanks and other potential contaminant sources. Five stand-alone USTs were located in Generals Hill area. Diesel fuel contamination from abandoned underground fuel storage tanks, most related to heating fuel, in 1990 the 675 gallon heating oil tank GH-01 and 30 years of impacted soil were removed. Confirmation sampling indicated DRO remaining at 250 mg/kg.</p>

Dutch Hbr-Humpy Cove Mess Hall UST	Open	Petroleum Site	3065	Mile X Summer Bay Road, Unalaska Island	Unalaska	AK	99685	USA	53.900556	-166.431389	No	No	No	Dutch Hbr-Humpy Cove Mess Hall UST http://dec.alaska.gov/Applications/SPAR-PublicM/VCCSP/SiteReport3065 Diesel contaminated soil at the former Mess Hall heating tank. The area is used for subsistence food gathering and fishing. The 300 gallon UST was removed 27 July 1998. Approximately 200 cubic yards of diesel impacted soil were excavated and transported offsite for treatment. Sampling indicated the excavation met Method II cleanup levels, except for one sample at the bottom of the excavation (26 feet below ground surface), which contained 400 mg/kg DRO. After backfilling was determined that the backfill had up to 890 mg/kg DRO. This site was the location of Fort Brumback and was a tactical embark area during WWII. It included troop housing, a mess hall, latrines, power generation facilities, a dispensary and offices. The U.S. Army Corps of Engineers had a contractor demolish and landfill the buildings and remaining debris in the mid-1980s. Underground fuel tanks were abandoned in place. In the mid-1990s the Corps of Engineers initiated further site investigation work to locate and address any remaining military contamination or sources of contamination.

Water and sludge were removed and the UST was closed in place. One soil sample was analyzed for DRO, RRO, PAH, and BTEX and revealed DRO concentrations exceeding ACLs at concentrations up to 60,700 mg/kg and RRO exceeding ACLs at concentrations up to 8,200 mg/kg. In 2001 further investigation was done to determine the extent of contamination and four more samples were analyzed from two locations downgradient. DRO and RRO results were below cleanup levels, and it was determined that contamination was not migrating from the site.

Marathon Granite Point Product Fac.	Open	Other (describe in Comments tab)	1288	Approx. 20 Mi. SW Tyonek	Tyonek	AK	99682	USA	61.0152	-151.41335		No	No	No	Marathon Granite Point Product Fac. http://dec.alaska.gov/Applications/SPAR-PublicM/VCCSP/SiteReport/1288 Leaking one inch glycol heating line caused contamination of soil and water. Line was repaired and the contaminated water and soil were excavated. No confirmation sampling was conducted. Site inspection of the facility found the area to be highly contaminated with crude oil. Site assessment of the facility is pending. The soils are being remediated at the Clean Soils facility in Anchorage. Estimated amount of soil to be remediated is one (1) ton of contaminated soil. The amount of remaining contamination is unknown.
